

## **Second Course in Financial Accounting**

### **Overview**

This course helps participants understand the conceptual framework of accounting and connections between accounting and planning, regulatory requirements, business strategies, and tax implications. This course lays the foundation for financial accounting. It starts with explaining the types of businesses and then introduces how these businesses' financial statements are analyzed and interpreted. In each session of the course listed below, case studies are used to test the concepts' understanding and help participants apply the knowledge acquired during the course.

### **COURSE CONTENT**

- **Intangible assets**
